

WET MOPPING SOLUTIONS

SELECTING THE RIGHT MOP

Keeping floors clean is a critical step in enhancing patron experience as nearly 60% of customers and employees report that visible cleaning is the most important aspect of their experience.*

Understanding key aspects of mop construction and how they impact product performance helps ensure optimal cleanliness.

ENSURE SAFETY

Yarn type is the most impactful driver of mop absorbency. Higher levels of absorbency allow for faster drying times, reducing the risk of slips, trips and falls.

MAXIMIZE PRODUCT LIFE

Consider end type when selecting a mop as it impacts fraying, unraveling and launderability. Mops with looped ends have an extended life-cycle.

DRIVE PRODUCTIVITY

The tailband type impacts the amount of floor coverage, which can help drive mopping efficiencies.

WET MOPPING SOLUTIONS

PRODUCT LINE		MOP CONSTRUCTION				MOPPING ATTRIBUTES

WEB FOOT®

Premium performance with maximum absorbency, durability and launderability. Available in shrinkless which is pre-laundered and requires no break-in period.

MAXIMIZER™

Industry-leading mop spread. Providing 30% more floor coverage at 25% less weight.

SWINGER LOOP®

Features looped ends, a woven tailband, and a higher synthetic yarn count for increased durability. Available in shrinkless which is pre-laundered and requires no break-in period.

SUPER STITCH®

Offers looped ends and a yarn tailband for improved spread and floor coverage.

UNIVERSAL

Features looped ends and a universal headband that works with both Gripper® and Invader® handles.

DISPOSABLE

Requires no break-in period and removes 3X more dirt and grease vs RCP cut-end cotton mops.

CUT-END

An economical solution for general-purpose floor cleaning or one-time use.
