

## Cleaning the PizzaMaster

### Daily

#### Exterior:

Damp a nonabrasive sponge in a solution of dish liquid and water and dry with a soft cloth.

#### Stone:

Brush and scrape out bake deposit and soot being careful to avoid hitting the top elements regularly during the day. Use a brass brush.

#### Glass:

- Cool the oven down to warm after the baking day **OR better yet**, clean **first thing in the morning**. (workers don't want to wait 'til it cools down; glass can shatter if cold cleaner hits the hot glass)
- Spray on the degreaser of your choice on a medium-duty cleaning pad: **Scotchbrite** #98 is a good example; **#2000** works well too.
- Dab it on the glass and let sit for a few minutes. **DON'T SPRAY DIRECTLY ON THE GLASS; WANT TO KEEP CLEANERS AWAY FROM STONES/INSIDE METALS**
- Once clean, wipe down with fresh water on the towel
- Need to do this **every day**. Don't let the grime build up over days/weeks.
- 

#### Recommended Grease Cleaners:
